

13-3 Practice

Radian Measure

Form G

Write each measure in radians. Express your answer in terms of π and as a decimal rounded to the nearest hundredth.

- | | | | |
|----------------|-----------------|----------------|-----------------|
| 1. 45° | 2. 90° | 3. 30° | 4. -150° |
| 5. 180° | 6. -240° | 7. 270° | 8. 300° |

Write each measure in degrees. Round your answer to the nearest degree, if necessary.

- | | | |
|----------------------------|-------------------------------|------------------------------|
| 9. $\frac{\pi}{6}$ radians | 10. $-\frac{7\pi}{6}$ radians | 11. $\frac{7\pi}{4}$ radians |
| 12. -4 radians | 13. 1.8 radians | 14. 0.45 radians |

The measure θ of an angle in standard position is given. Find the exact values of $\cos \theta$ and $\sin \theta$ for each angle measure.

- | | | |
|----------------------|-----------------------|-----------------------|
| 15. $\frac{\pi}{6}$ | 16. $\frac{\pi}{3}$ | 17. $-\frac{3\pi}{4}$ |
| 18. $\frac{7\pi}{4}$ | 19. $\frac{11\pi}{6}$ | 20. $-\frac{2\pi}{3}$ |

Use each circle to find the length of the indicated arc. Round your answer to the nearest tenth.

13-3 Practice (continued)

Radian Measure

Form G

27. The minute hand of a clock is 8 in. long.
- What distance does the tip of the minute hand travel in 10 min?
 - What distance does the tip of the minute hand travel in 40.5 min?
 - What distance does the tip of the minute hand travel in 3.25 h?
 - Reasoning** After approximately how many hours has the tip of the minute hand traveled 100 ft?

28. A 0.8 m pendulum swings through an angle of 86° . What distance does the tip of the pendulum travel?

29. A scientist studies two islands shown at the right. The distance from the center of the Earth to the equator is about 3960 mi.
- What is the measure in radians of the central angle that intercepts the arc along the equator between the islands?
 - About how far apart are the two islands?

Determine the quadrant or axis where the terminal side of each angle lies.

30. $\frac{\pi}{5}$

31. $-\frac{5\pi}{2}$

32. $\frac{5\pi}{3}$

33. $\frac{8\pi}{7}$

Draw an angle in standard position with each given measure. Then find the values of the cosine and sine of the angle to the nearest hundredth.

34. $\frac{5\pi}{4}$

35. -3π

36. $\frac{2\pi}{9}$

37. **Error Analysis** A student wanted to convert 75° to radians. His calculation is shown below. What error did he make? What is the correct conversion?

$$\frac{(75 \times 180)}{\pi} \approx 4297.18 \text{ radians}$$
